

# Dental Auxiliary – Implant Training

---

Dental Office Solutions is pleased to extend its implant training to include a course dedicated to dental staff and dental assistants.

Incorporating Implantology into a general dental practice can be a challenging task. After years of experience we have discovered that the key to a successful transition is using a team approach. When the entire staff is knowledgeable about implants, the patients seem to sense it. A well trained team exudes confidence and will help to identify and promote implant treatment. They will become a magnet for patient treatment acceptance.

The key to confidence is knowledge. At the minimum - Implantology includes learning new words for the vocabulary, inventory, materials management, sterilization techniques, patient treatment time lines, billing, charting, and more. This course is designed to build a foundation of implant knowledge for the dental team.

The Dental Auxiliary Training Course is presented in an in-depth easy to understand course. Participants will do hands-on exercises, surgical set-up and observe a live implant surgery. The scope of learning includes patient communications, pre and post surgical protocols, implant inventory, material handling, charting, billing concepts, and patient education. The course provides exercises, designed to help teach efficient surgical set-up, operatory break down and sterilization of the delicate surgical kit components. Topics are designed to give the participants a wide range of implant experience.

By sharing a passion for implants and the true benefits of implant dentistry with your team this course can accelerate implant treatment as well as elevate the quality of your patient's experience. This course delivers a unique and memorable CE experience for your team members.
